PRODUCT PROFILE

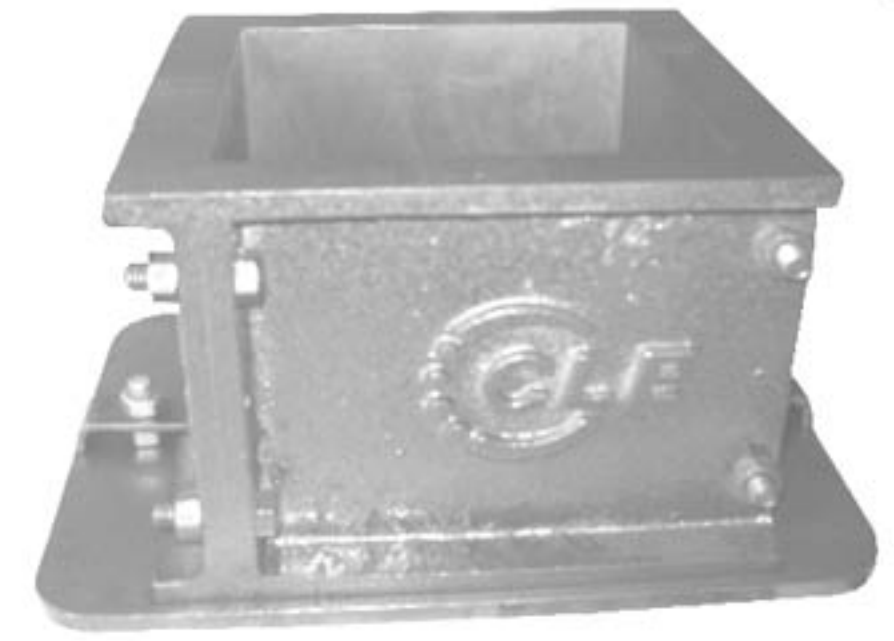

CUBE MOULD (150 MM)

With advance production equipment, rich technical force, the consummate making technology, the product is of high quality standard.

We have modern and well-equipped Quality Control laboratory which ensures that a series of scrupulous tests are executed at every stage of manufacturing the mould.

Our technically qualified personnel run continual check on the following parameters:

- Distance between opposite faces: 150mm±0.2mm.
- Height of Mould: 150mm±0.2mm
- Planeness of Inside surface: <0.03mm

for Further details contact:

CONSAL LABORATORY EQUIPMENTS

• High accuracy and performance

• Click stop digital system.

• Easy calibration and maintenance

• Separate streamlined tip ejector.

• Autoclavable tipcone assembly.

Features: Innovated rich oxygen air-acetylene flame analysis technique:

The patented flame analysis technique adopting rich oxygen air-acetylene flame as the substitution for nitrous oxide-acetylene flame for high temperate element analysis, such as Ca, Al, Ba, W, Mo, Ti, V etc. Flame Temperature is continuously adjustable between 2300-2950 °C, which makes it possible to choose the best atomization temperature for different elements. It features easy operation, low analysis cost and wide flame AAS analytical range. Rich oxygen flame will not pollute the environment and is not harmful to human bodies. It's a break through in flame AAS analysis.
